EDUCATION

Clarkson University Potsdam, NY
B.S. in Computer Science | GPA 3.65/4.00 | Dean's List: Spring 2025 - Present *Expected Dec 2027*

Cornell University Remote
Machine Learning e-Certificate *May - Aug 2025*

Coursework: Data Structures and Algorithms, Operating Systems, Probability & Statistics, Applied Linear Algebra, Object-Oriented Programming, Software Design & Development

PROFESSIONAL EXPERIENCE

Tristar AI | AI Startup Cambridge, MA
Software Engineering Intern *Aug 2026 - Present*

- Trained a YOLO segmentation model using PyTorch for automated quality inspection of films, boosting defect detection performance to 87.5% mIoU by systematically tuning learning rates, dropout, and early-stopping patience.
- Implemented a hardware part detection service in a RabbitMQ → S3 inspection pipeline for two 4K cameras, cutting latency by 94% through halving frame resolution and shrinking the median blur filter before segmentation.

BNY New York, NY
Software Engineering Intern *Jun 2026 - Aug 2026*

- Engineered a Python-based Model Context Protocol (MCP) server to automate full internal network sweeps, reducing daily reconnaissance and data ingestion workloads by an estimated 86% via autonomous agent tool orchestration.
- Automated cyberattack containment by designing and building an agentic AI solution using JavaScript and REST APIs, optimizing containment speed by an estimated 70%.

Accenture | Break Through Tech Remote
Machine Learning Engineering Fellow *Sep 2025 - Dec 2025*

- Engineered a data preprocessing pipeline for 40,000 text samples, implementing data cleaning and a Bag-of-Words feature engineering framework to transform raw text into model-ready vectors.
- Trained NLP classification models using scikit-learn and TensorFlow to detect fake news for a trust and safety content moderation use case, improving final model accuracy by 13% through systematic hyperparameter tuning and k-fold cross-validation.

Wabtec Corporation Erie, PA
Software Engineering Intern *May 2025 - Aug 2025*

- Automated the locomotive troubleshooting workflow for about 5 to 10 engineers using Python to programmatically surface simulator status, connectivity, and configuration data, cutting the troubleshooting workload by 75%.

PROJECTS & PUBLICATIONS

Behavior Beyond Text | Co-author NeurIPS AIW, AABA4ET and COLM WAB 2026

- Co-authored an AI safety paper demonstrating that text-based refusals often fail to transfer to tool-calling agents across 5 LLMs, using a custom benchmark and analyzing refusal behavior through mechanistic interpretability.

Colin | Next.js, TypeScript, React, Node.js, Tailwind CSS, PostgreSQL

- Designed and implemented Colin, a two-sided marketplace connecting non-CS engineering students with working engineers for 30-minute coffee chats, solving the lack of field-specific career guidance; grew the app to 18 users.
- Engineered the full-stack TypeScript app with Next.js API routes and server actions, a PostgreSQL schema (14 SQL migrations) with row-level security, slot scheduling, per-email and per-IP rate limiting, and a daily booking-expiry and reminder job.

CoHaven | Next.js, TypeScript, React, Node.js, LangGraph

- Built CoHaven, an AI housing search agent that helps relocating interns find rentals within budget from one natural-language query.
- Architected a 5-step LangGraph backend (plan, fetch, extract, filter, present) behind a Next.js API route, isolating untrusted web content from a tool-less Claude model, enforcing an 8-domain allowlist and budget cap, and tracing runs in LangSmith.

Customer Support Chatbot | Python, LLMs, Hugging Face

- Built a Python-based LLM agent leveraging retrieval augmented generation (RAG) with vector embedding search over Amazon help articles, answering with Google's Flan-T5 from the top 2 matches; a 0.3 similarity threshold blocks off-topic answers.

JPMorgan Chase Software Engineering Job Simulation on Forage | Python, React, TypeScript, Perspective.js

- Built a real-time market analytics service: a multi-threaded Python backend serving simulated order-book data to concurrent clients, with a React and TypeScript frontend (Perspective.js) polling every 100 ms for live visualizations; load-tested with 500 polling runs.

TECHNICAL SKILLS

Languages: Python, C++, TypeScript, JavaScript, Java, Go, SQL
ML & Data: PyTorch, TensorFlow, NumPy, Pandas, Matplotlib, Seaborn, MLflow, Hugging Face, scikit-learn, XGBoost
Backend & Infrastructure: React, Next.js, FastAPI, Node.js, REST APIs, LangGraph, PostgreSQL, Docker, AWS, Git
Tools: Claude Code, Cursor, Kaggle, Google Colab
